- 20 SitaVent refurbishment vent
- 21 SitaTurbo loose retention valve

# for Conventional **Drainage:**

# Your roof needs drainage!

Rainwater weighs heavy on roofs - and can be a real test for the seal and structural strength. Conventional drainage is the most common type of roof drainage for flat roofs. It is governed by clear design regulations. The required number of rainwater outlets is defined by the size of the roof area. A separate fall pipe is generally connected to each rainwater outlet - so that rainfall can be drained reliably at all times.

### **SitaStandard**

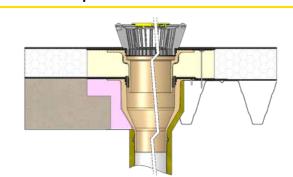

#### **Properties**

The classic Sita item is ideal for almost any installation situation: the SitaStandard. Thanks to the thermally insulated rainwater outlet body made from rigid polyurethane integral foam, it can withstand compressive forces and is also resistant to normal environmental effects. The SitaStandard features a large inlet part and a high discharge volume resulting out of that.

- Maximum discharge volumee
- Up to size DN 200
- Robust construction
- + Homogeneous roofing membrane connection
- Suitable for bridging all insulation thicknesses from 60 to 520 mm

#### Installation example

screw-on flange

SitaTrendy

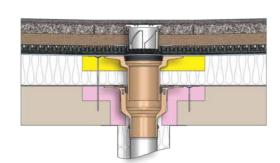

#### **Properties**

The SitaTrendy features a compact design and high discharge volume. The flexible rainwater outlet is available with a selected connection sleeve and compatible with the SitaTrendy screw-on  $\,$ flange product family.

- + Compact design
- + Discharge rate considerably above the requirements of DIN EN 1253-2
- Also available with foamed-in heating element
- + With foamed-in connection sleeve of choice, screw-on flange or adhesive flange

#### Installation example

#### **Properties**

The SitaTrendy screw-on flange features a compact design and high discharge volume. The flexible rainwater outlet is also compatible with the SitaTrendy product family.

# for Siphonic Drainage:

## Drainage at full capacity!

Do you have particularly large roof areas on industrial, free-standing buildings? And you have a need for great space inside them? In that case siphonic drainage is the ideal system for you. Fewer ground pipelines are required for it - which means that almost no earthworks are needed. The drainage takes place internally in full, minimising the number of fall pipes – this saving space overall.

#### SitaDSS Profi

#### **Properties**

This series was developed by specialists for specialists. In addition to a high discharge volume, the SitaDSS Profi series features particularly low pressure losses and is simple to install. Only a few components and actions are required on site to assemble a perfect siphonic drainage system. The siphonic drainage rainwater outlet is available with a selected connection

- For direct connection to PE pipelines
- High discharge volume
- Easy installation due to small number of parts

SD.

SitaDSS Ravana Plus

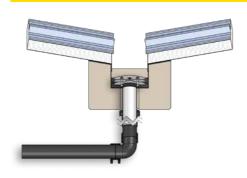

for liquid applied

#### **Properties**

The SitaDSS Ravana Plus gutter rainwater outlet developed for liquid applied waterproofing will fit into 200 mm narrow gutters without modification. That means maximum flexibility in application and installation.

- + For narrow gutters
- + For sealing with liquid compounds
- + Adhesive flange can be adjusted to the gutter geometry
- → With prefabricated holes for fastening direct to the substructure

16 \*OD = Outer diameter

# for Emergency Drainage:

You must get the water off the roof.

You need an emergency drainage system to get the water off your roof if it rains heavily. The main drainage system cannot manage these large volumes quickly enough. As climate change takes hold, an increase in heavy rainfall incidents is predicted. Rain can be a burden. To protect people, buildings and property, there are binding regulations which treat rain drainage systems as a whole.

#### **Properties** SitaTurbo with loose retaining flange

The SitaTurbo with loose retaining flange is something really special. When installed in the roof structure, this robust and extremely flat rainwater outlet routes water outwards through the parapet. The slight weakening of the thermal insulation and the external pipeline system minimise thermal bridges.

- + Very high discharge rate
- + For main and emergency drainage
- + Extremely flat construction
- + Screw-on flange construction

#### Properties SitaTurbo inverted roof

The SitaTurbo inverted roof has been specially developed for the emergency drainage of inverted roofs. The sealing membrane has a watertight connection to the loose-fixed flange construction on the rectangular pipe. The water-draining fleece is clamped in the loose-fixed flange connection of the inlet pot and minimises water ingress into the installation level.

- + Very high discharge rate
- + For the emergency drainage of inverted roofs
- Matching XPS insulating bodies available
- + Screw-on flange construction

SitaTurbo Max

**Properties** SitaTurbo Max inverted roof with retaining ring

# SitaTurbo Max

# SitaTurbo Max

#### **Properties** SitaTurbo Max with loose retaining flange

The SitaTurbo is something really special. When installed in the roof surface, this robust and extremely flat roof outlet routes water outwards through the parapet. Minimal weakening of the thermal insulation and the external pipeline system minimise thermal bridges. The standard Turbo is great for piped drainage, but the SitaTurbo Max has a round inlet to optimise flow characteristics, making it perfect for use with a spout.

- → Up to 65% larger discharge rate than the SitaTurbo
- For main and emergency drainage
- Extremely flat construction
- Screw-on flange construction

#### Properties SitaTurbo Max inverted roof

The SitaTurbo Max inverted roof has been specially developed for the emergency drainage of inverted roofs. The sealing membrane has a watertight connection to the screw-on flange construction on the rectangular pipe. The water-draining fleece is clamped in the screw-on flange connection of the inlet pot and minimises water ingress into the installation level.

- + Up to 65% larger discharge rate than the SitaTurbo
- For emergency drainage on inverted roofs
- Matching XPS insulating bodies available
- + Screw-on flange construction

#### Properties SitaTurbo Max with retaining ring

SitaTurbo Max

SitaTurbo Max

with retaining ring

The SitaTurbo is something really special. When installed in the roof surface, this robust and extremely flat roof outlet routes water outwards through the parapet. Minimal weakening of the thermal insulation and the external pipeline system minimise thermal bridges. The standard Turbo is great for piped drainage, but the SitaTurbo Max has a round inlet to optimise flow

- + Up to 65% larger discharge rate than the SitaTurbo
- For main and emergency drainage
- Screw-on flange construction

characteristics, making it perfect for use with a spout.

- Extremely flat constructionn

The SitaTurbo Max inverted roof with retaining ring has been specially developed for the emergency drainage of inverted green roofs. The sealing membrane has a watertight connection to the screw-on flange construction on the rectangular pipe. The water-draining fleece is clamped in the screw-on flange connection of the inlet pot and minimises water ingress into the installation level. The retaining ring can be flexibly shortened on

# **SitaRondo**

# **SitaSpy**

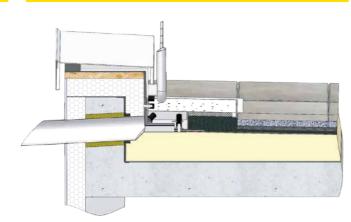

#### **Properties**

The SitaRondo with round pipe is suitable for main and emergency drainage through the parapet where internal downspouts cannot be used for drainage. The screw-on -fixed flange construction of the SitaRondo guarantees flexible connection options for all standard roof membranes.

- + For main and emergency drainage
- Special lengths possible
- Material: rust-proof stainless steel
- → Direct connection to the SitaPipe stainless steel pipe system possible
- + Single-part loose flange loose retaining flange

#### Installation example

#### Installation example

# SitaIndra/SitaDSS Indra

#### **Properties**

Very light, very flat and very quick to install! With these benefits, the SitaIndra and SitaDSS Indra can convince installers who want effective thermal insulation. The parapet drainage rainwater outlet made from thermally insulated PUR is supplied as a complete set including insulating bodies.

#### Sitalndra emergency drainage set

- Available as a complete set: No additional purchase required
- Very low installation height: Less weakening of the thermal insulation
- Can be connected to SitaPipe stainless steel pipe system
- + Inclination gradient 1°

#### **Quality marks**

#### SitaDSS Indra emergency drainage set

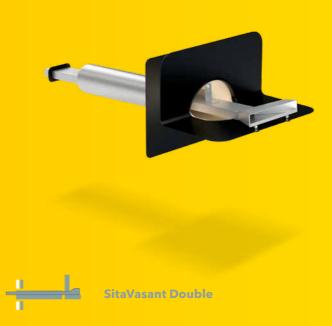

- + The siphonic drainage system for small and large areas
- Easy installation with a complete set
- Available with three alternative fall pipe lengths
- Can be connected to SitaPipe stainless steel pipe system

Important! Specify the selected connection sleeve (xx) in your order.

## **SitaVasant Double**

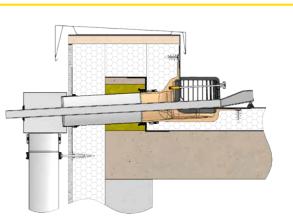

#### **Properties**

A gully with two separate inlets that function independently of each other, that is what is special about the SitaVasant Double. Main drainage and emergency drainage are combined in one gully and require only one penetration in the parapet. If the water level on the roof rises to the emergency drainage level, an emergency drainage channel offset in height by 35 mm is provided, which discharges onto a freely floodable surface.

- + For main drainage or combined main/emergency drainage
- As a set for easy installation
- 🕂 In combination with a transition piece for connection to the downpipe
- With connection sleeve of choice\*\*

SitaEasy

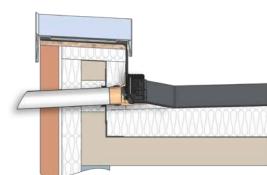

The SitaEasy is suitable for main and emergency drainage through the parapet. The foamed in selected connection sleeve provides installers with a simple, safe and homogeneous connection to the roof seal.

The SitaEasy Plus is a small parapet drainage rainwater outlet specially developed for emergency drainage. Its integrated selected connection sleeve enables installers to achieve a simple, secure and homogeneous connection with the roofing membrane on the parapet.

The SitaEasy Go is the perfect parapet solution for bitumen-sealed roof areas such as balconies and terraces. With its 45° wedge design, it fits perfectly with the thermal insulation, ensuring that bitumen roof membranes can be welded straight to it.

- + For main and emergency drainage
- With integrated selected connection sleeve
- With angled or straight fixed flange
- Can be combined with the stainless steel SitaPipe stainless steel pipe system
- + Can be combined with vapour barrier plate flex

# for Parapet Drainage:

## Keep the water off!

Parapet drainage removes the water quickly and directly from the roof – with either a pipe system or using waterspouts. Since the drainage is external, it also means that the water stays off. An ideal solution for buildings where internal drainage is not possible. The installation of the system hardly affects the existing building. Drainage through the parapet is also durable – drain to the outside, rainwater volumes can also be used for other purposes.

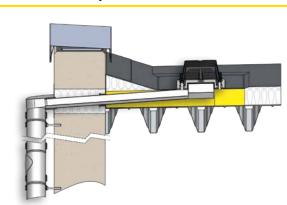

#### **Properties**

The SitaTurbo is something really special. When installed in the roof surface, this robust and extremely flat rainwater outlet routes water outwards through the parapet.

The slight weakening of the thermal insulation and the external pipeline system minimise thermal bridges.

- + Particularly high discharge volume
- → For main and emergency drainage
- + Extremely flat construction
- Material: Stainless steel
- Loose-fixed flange construction

#### Installation example

# SitaTurbo Pipe length\* (mm) Article number 600 18 60 99 1000 18 62 99 2000 18 71 99 Cross section of pipe: 120 x 60 mm

#### Accessories

# **SitaRondo**

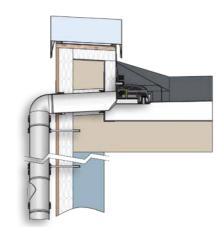

#### **Properties**

The SitaRondo with round pipe is suitable for main and emergency drainage through the parapet where an internal fall pipe cannot be used for drainage.

The loose-fixed flange construction of the SitaRondo guarantees flexible connection options for all standard roof membranes.

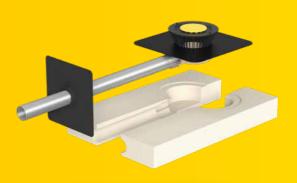

- + For main and emergency drainage
- + Special lengths available
- → Material: Stainless steel
- + Direct connection to the SitaPipe stainless steel pipe system possible
- + One-piece angled loose flange

#### Installation example

## **SitaDSS Indra**

#### **Properties**

Discover siphonic drainage through the parapet for small and large roof areas. The SitaDSS Indra is just what you need. The component measures just 98 mm in height, ensuring it fits into the thermal insulation perfectly. Everything you need for quick installation is supplied in a set - all supplied in a yellow Sita box ready to get installed. For either main or emergency drainage. Matching stainless steel pipes included. And everything runs smoothly.

#### Main drainage

- + Siphonic drainage for small and large areas
- Easy installation with a complete set

SitaDSS Indra

- Particularly high discharge volume of up to 17.0 l/s
- Available with three alternative fall pipe lengths
- Can be combined with the SitaPipe stainless steel pipe system

#### **Quality marks**

Important! Specify the selected connection sleeve (xx) in your order (see page 104).

#### **Properties**

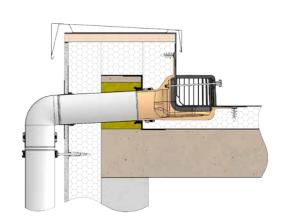

**SitaVasant** 

Gone are the days when a simple gully was sufficient for drainage at the parapet. Today, drainage capacity is often required there as well. The new SitaVasant delivers it. With its ultra-flat, only 48 mm high it only minimally interferes with the thermal insulation. A pre-mounted inlet pot ensures rapid drainage performance, which accelerates the drainage performance.

- + For main drainage
- As a set for easy installation
- In combination with a transition piece for connection to the downpipe
- With connection sleeve of choice\*\*

# SitaEasy / SitaEasy Go

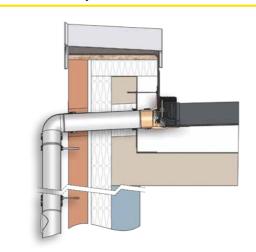

#### **Properties**

The SitaEasy is suitable for main and emergency drainage through the parapet. The integrated selected connection sleeve provide installers with a simple, safe and homogeneous connection to the roof seal.

The SitaEasy Go is the perfect parapet solution for bitumen-sealed roof areas such as balconies and terraces. With its 45° wedge design, it fits perfectly against the thermal insulation, ensuring that bitumen roof membranes can be welded straight to it.

- + For main and emergency drainage
- + With integrated selected connection sleeve
- + With angled fixed flange
- + SitaPipe stainless steel pipe can be combined with stainless steel safety clamp
- + Can be combined with vapour barrier plate flex

# for Cascade drainage:

Sita cascade drainage is compliant with standards.

It discharges rainfall in a controlled manner in a closed system to the point of transfer to the sewer system or to surfaces that can be flooded without causing damage. Thus, it offers planning certainty and enables uncomplicated installation due to the simple component systems. Concealed pipe installation allows for aesthetic solutions and individual freedom, e.g. in the design of the terrace surface structure.

## SitaKaskade Inside

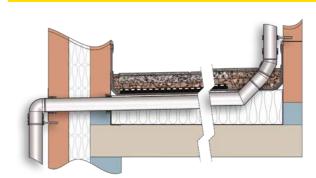

#### **Properties**

In the past, installing a cascading drainage system has always been a grey area in building law. SitaKaskade Inside is a standardcompliant component system for rain drainage over multiple levels, which is also visually attractive. SitaKaskade Inside conforms with standards and delivers legal certainty for the first time. Component system: Quick, safe installation. Aesthetic solution for challenging architecture: Invisible pipe routing, the terrace surface structure can be individually designed.

- Legal security for the first time standard-compliant
- Planning security and safe installation using component system
- Concealed pipe installation
- + Free range of options for the individual design of the terrace structure

# **SitaKaskade**

# SitaKaskade lead-through fluid

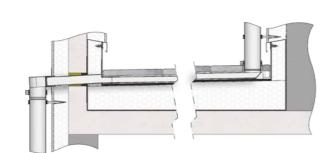

#### **Properties**

SitaKaskade Flat is the next stage of development of the SitaKaskade Inside. Cascade drainage with high compressive and tensile strength can now be integrated in the system above the waterproof membrane. Standards-compliant cascade drainage remains possible below the slab paving, thanks to a height of just 40 mm, a vertical downpipe holder and a horizontal parapet leadthrough.

- + For safe cascade drainage below the slab paving
- Compatible with the SitaPipe stainless steel pipe system
- + Integrated coupler for easy and reliable connection of the downpipe
- + With adhesive flange for liquid applied waterproofing
- + As waterspout or in combination with the SitaTurbo adapters

#### Installation example

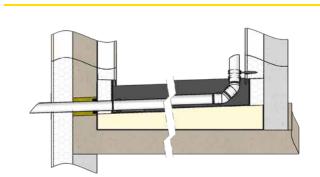

#### **Properties**

With the SitaKaskade lead-through, passing pipes through the parapet is much easier and safer. The adhesive flange for liquid applied waterproofing supports all methods to create a safe parapet lead-through. Folded near the edge, the product allows the pipe to be laid directly on the waterproof membrane to provide standards-compliant cascade drainage above the waterproofing

- + To lead the pipe safely through the parapet
- + Compatible with the SitaPipe stainless steel pipe system
- + Integrated socket for easy and reliable connection
- + With adhesive flange for liquid applied waterproofing

Perfectly planned, module by module, step-by-step.

Sita rainwater roof outlets, e.g. SitaDSS Indra or SitaEasy Siphonic drainage system as main or emergency drainage,

available in a complete

2

SitaKaskade Inside

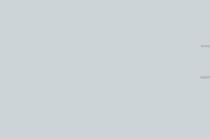

For ensuring that rainwater is rerouted reliably from higher to lower roof surfaces.

3

SitaPipe stainless steel pipe system

For spanning longer horizontal and vertical flow channels.

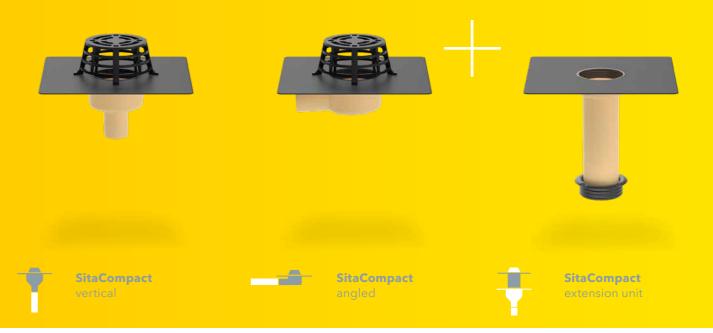

# for Balcony and Terrace drainage:

For rain - even on very small spaces.

No worries when a shower is looming. Sita's solutions for balcony and terrace drainage protect your balcony and terrace spaces from flooding and backflow - for dry areas and standardcompliant drainage. Its low installation depth and high discharge volume helps even in heavy rainfall incidents. Furthermore, the installation work requires minimal intervention in the existing architectural structure.

# **SitaCompact**

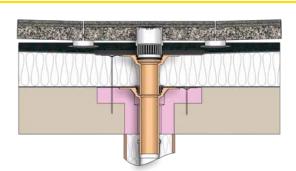

#### **Properties**

Small yet particularly efficient balcony outlet versions are required on small flat roofs, terraces, balconies and garages to ensure good drainage due to the fact that constricted space is often the case. The SitaCompact balcony outlet series has been specifically designed for this purpose.

- + Small cross-section massive capacity
- + Suitable for insulation blocks of 50 mm and thicker
- → With selected connection sleeve
- Compatible with the SitaCompact screw-on flange
- With flexible balcony grates

#### **Properties**

For used roofs, especially balconies or terraces on top of each other, the confined space means that effective drainage requires small outlets to be installed close to the facade. The SitaCompact Near series was developed for exactly this application. The PUR collar of the SitaCompact Near is slanted, saving valuable centimetres. That means that the outlet and downspout can be positioned very close to the facade, maximising the usable space.

- + Ideal for linear drainage of vertically aligned balconies
- Specifically for close installation on the cladding
- Small cross-section massive capacity
- → With plastic connection sleeve of choice
- With flexible range of accessories

Get yourself all-round protection!

Sita drainage systems collect rainwater before it gets to the building. Like a modern water trench, the drainage system at ground level protects the interior of your building. The facade is also protected from heavy rainfall splashing back. The drainage system with a grating and frame is sturdy and durable.

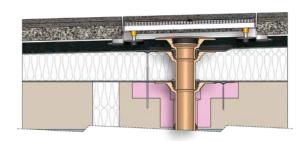

#### **Properties**

SitaDrain® is the excellent addition to the drainage systems for balconies, terraces and walkways. The SitaDrain® drainage grating runs like a protective belt around the whole building, catches the water and routes it into the Sita roof or balcony outlets.

- + Large height differences can be bridged
- Load rating class K 3, can be travelled over in a wheelchair
- + Ideal supplement to roof or balcony outlet
- Infinitely height-adjustable
- Different lengths and widths

#### Installation example

#### **Properties**

The SitaDrain® area frame is used as an inspection shaft for outlets on terraces and balconies. Its all-round frame, supported on 4 sides, give it a secure hold, allowing it to be set to any height level. No feet are required, so the maximum usable surface is retained under the component, for example for an emergency drainage outlet.

- + The area frame means easy installation without height adjustment
- + Large height differences can be bridged
- + Ideal supplement to roof or balcony outlet
- Rust-proof stainless steel or galvanised steel
- → Sits directly on the slab paving
- + Available with different grating designs

# SitaDrain® Wood

stainless steel

#### **Properties**

D

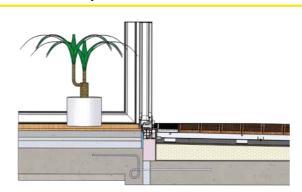

The SitaDrain® Wood is used on terraces and balconies with timber or WPC covering. The products of this series have a low installed height, making them perfect for laying directly on the substructure and reliably draining the water. The different grating designs meet the highest design standards.

+ For laying with timber or WPC covering

SitaDrain® Wood

- → Meets the requirements of load rating class K 3
- With mesh cover, footbridge or designer grate
- Made of high quality stainless steel
- + Height: 22 mm

#### Installation example

# for Green roof and Retention:

Specially developed for green roofs as well as for roofs without ballast, the retention solutions cause rainwater to be temporarily retained on the roof. This guarantees controlled discharge of the rainwater for retention roofs. The SitaGreen product family delivers perfect support for green roofs - to discharge rainwater at all levels of the structure.

## **SitaGreen**

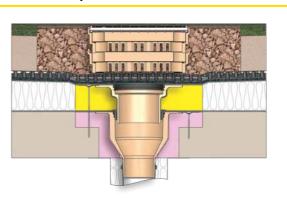

#### **Properties**

The SitaGreen product family is the preferred solution for rainwater drainage on all levels of the layered structure for green roofs. The SitaGreen inspection shafts are suitable for both extensive and intensive roof greenery.

- Modular inspection shaft
- Drainage of all layers
- Suitable for all roof greenery
- + Infinitely height-adjustable
- + Simple installation

#### Installation example

SitaRetention Twist without dome grate

# SitaRetention green roof shalt

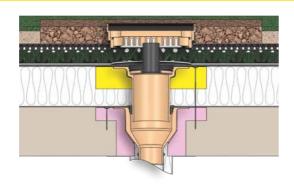

#### **Properties**

GR

Specially developed for restricted flow roofs, SitaMore Retention is installed in a Sita rainwater outlet to ensure that the rainwater can be retained using a specially designed rain retention space. SitaGreen Retention is used as an inspection shaft to prevent the formation of algae and moss.

- + For use in conventional drainage oulets for targeted reduction of water intake
- Optionally with or without dome grate depending on application
- + Simple insertion in the outlet pot without extra tools
- + With scaled adjusting slide or predefined opening
- + For controlled rainwater drainage

#### **Properties**

Specially developed for retention roofs, the SitaRetention product family ensures that the rainwater is retained for a certain period of time on the roof. With SitaRetention Fix or SitaRetention Twist without dome grate, together with the SitaRetention green roof shaft, any green roof can be upgraded to a retention roof. On flat roofs without ballast, SitaRetention Twist with dome grate efficiently reduces the load on ground pipelines during heavy rainfall events. This guarantees controlled discharge of the rainwater for retention roofs.

- + For use in conventional drainage outlets for targeted reduction of water intake
- + For foil roofs with dome grate, for green roofs with green roof shaft
- + Simple insertion in the outlet pot without extra tools
- + With scaled adjusting slide or predefined opening
- + For controlled rainwater drainage

# for Refurbishment:

The older the roof, the greater the risk.

Keep an eye on the condition of your roof at all times with Sita. Flat roof refurbishment is required more and more frequently. There are lots of reasons for this - changed regulations, leaking old rainwater outlets and pipelines, damaged roof skin and even saturated insulation. Statutory regulations mean that thermal insulation has to be topped up. As your refurbishment partner we can help you to update your drainage system and comply with the required standards.

### SitaSani®

### **Properties**

SitaSani®

The SitaSani® problem solver with a long spigot and sealing ring. This compensates for the existing waterproofing and insulation layers to the rainwater outlet or fall pipe in place. Multicompatible for almost any make of rainwater outlet, the rainwater outlets of this series can solve almost any refurbishment task. The various sealing rings are used to match the existing internal diameters. The integrated and additionally fixed selected connection sleeve offers a homogeneous connection to the roof seal.

- + Backflow safe up to a water column of 2 metres
- To refurbish rainwater outlets and for refurbishment down into the fall pipe
- With selected connection sleeve
- Can be installed and sealed very quickly

# for Ventilation and pipe fairlead:

Your building needs ventilation!

A well coordinated system is required to ensure your building can breathe in and out. Our ventilation pipes are integral and provide a perfect connection. We supply you with a comprehensive aeration solution. As your partner for ventilation components, Sita will supply the components you need - whether it is for room, section or cold roof ventilation. Durable, sealed material helps you achieve simple, solid vent solutions from Sita – for a single or dual skin roof.

### **SitaVent**

### **Properties** SitaVent system vent

The SitaVent system vent is the secure roof connection for all room and section ventilation. The base plate including the integrated selected connection sleeve can cover almost every sealing connection. A multi-lip seal provides backflow safety up to a water column of 2 m.

- → With integrated selected connection sleeve
- + Can be supplied as cable and pipe fairlead
- → With removable 180° bend
- Can be combined with the SitaVent vapour barrier cap

### Properties SitaVent pipe fairlead

Made from polyurethane in sizes DN 100 or DN 150. The SitaVent pipe fairlead is supplied with an integrated selected connection sleeve to match the roofing membrane, including rain rejector and removable 87.3° bend.

- With integrated selected connection sleeve
- Can be supplied as cable and pipe fairlead
- With two removable 87.3° bends
- Can be combined with the SitaVent vapour barrier cap

### **Properties** SitaVent cold roof vent

SitaVent cold roof vent made from polyurethane, thermally insulated, with integrated selected connection sleeve, with rain rejector, sealing ring and rain cover. Height 400 mm.

- For cold roof ventilation
- With integrated selected connection sleeve
- + In sizes DN 100 and DN 150

### **SitaVent**

refurbishment vent

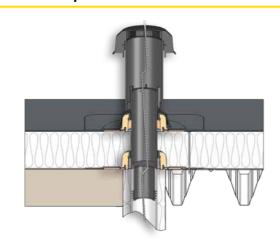

### **Properties**

V

The SitaVent refurbishment vent secures the transition into the old vent pipe to be refurbished. It is supplied as a set, containing all the required components. These include the base plate with selected connection sleeve, the rejector and the refurbishment vent pipe with an adapter to the pipe being refurbished and matching multiple-lip EPDM rubber seal. A new warm roof structure can be completed with an additional base plate.

- + For room and section ventilation
- With integrated selected connection sleeve
- Connection to all functional layers
- For pipe diameters up to 205 mm

### Installation example

### Base plate DN SitaVent OD\* Backflow Article safe from number ment vent (mm) 68-86 100 17 30 xx 75 82-103 100 17 31 xx 90 98 - 107 17 32 xx 110 115-130 100 17 33 xx 125 140-168 150 17 34 xx 160 178-205 150 17 35 xx

### **SitaVent**

SitaVent

### **Properties** SitaVent Revision

Vapour barrier under control. Is the vapour barrier actually dry? The new SitaVent Revision allows a quick check of the status below the thermal insulation at any time. Always in demand from the market, Sita developed the new revision component on the basis of the approved SitaVent.

- + To inspect the vapour barrier
- Including fixing for a thermal insulation core
- Alternatively to support a thermo-hygrometer
- With integrated selected connection sleeve
- Secures the vapour barrier cap with a pipe clip

### **Properties** SitaVent condensation deflector

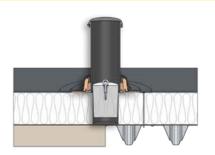

SitaVent condensation deflector: Fully sealed. Moisture is the enemy of any structure. That is why Sita developed the new SitaVent condensation deflector which prevents condensation dripping through the vent pipe back into the building. This product extension is used with the SitaVent system bent and/or SitaVent refurbishment vent.

- + Simple installation
- Secure fixing against wind loads
- Condensation is discharged straight onto the waterproofing
- Suitable for SitaVent pipes DN 100

# for Fire Protection:

### Don't give fire any space!

All-round cover - not just when it rains - if there is a fire as well. Sita Fire protection solutions prevent the dangerous spread of fire and radiated heat. Whether there is a fire at the bottom or at the top or fire pockets in the roof structure - they are all prevented from passing through drainage and ventilation components. If you are unlucky enough to have a fire, the roof layer package protects your roof from its spread – with solutions from Sita.

## **SitaFireguard®**

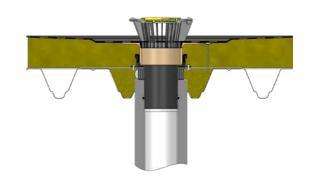

### **Properties**

Double protection: from water and from fire. What's behind the stable protection provided by the new SitaFireguard® outlets and vents? It's a simple but genius idea: a smart fire protection sleeve permanently attached to the reinforcement plate for trapezoidal steel roofs. Also: Installation is possible entirely from the roof itself.

- + For preventive fire safety to DIN 18234
- + As a full set it provides and easy and safe installation
- + Small roof penetrations thanks to optimised shape of the PE-base body
- Optimised backflow safety thanks to perfectly seated sea
- With integrated selected connection sleeve
- + For main and emergency rainwater roof draianage

### **SitaFireguard®** screw-on flange

with retaining element

# SitaDSS Fireguard®

SitaDSS Fireguard®

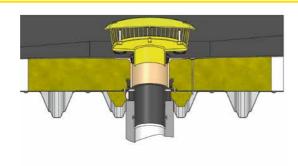

SitaDSS Fireguard®

### **Properties**

Double protection: from water and from fire. What's behind the stable protection provided by the new SitaFireguard® outlets and vents? It's a simple but genius idea: a smart fire protection sleeve permanently attached to the reinforcement plate for trapezoidal steel roofs. Also: Installation is possible entirely from the roof itself.

- + For preventive fire safety to DIN 18234
- As a full set it provides and easy and safe installation
- + Small roof penetrations thanks to optimised shape of the PE-base body
- Optimised backflow safety thanks to perfectly seated sea
- → With integrated selected connection sleeve
- + For main and emergency rainwater roof draianage

### Installation example

# SitaFireguard® pipe fairlead

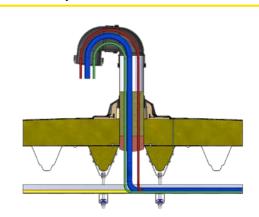

### **Properties**

The SitaFireguard® pipe lead-through is the secure roof connection for all cable and media lead-throughs on used and unused flat roofs with DIN 18234 fire protection requirements. The base plate including the foamed-in connection sleeve of choice can cover almost every sealing connection. A multi-lip seal provides backflow protection up to a water column of 2 m. The integrated fire protection plug prevents the spread of fire onto the roof.

- + For preventive fire safety to DIN 18234
- + A complete set allowing easy and safe installation
- + With foamed-in connection sleeve of choice
- + Fire protection plug for safe leadthrough of cables and media

# **SitaMulti**

### **SitaDSS Multi**

SitaDSS Multi

SitaDSS Multi

### **Properties**

The SitaMulti roof outlet set new standards in versatility. Its fire resistance ensures it can be utilised in places with high fire protection requirements. Together with the SitaMulti grating frame, it is even possible to drive vehicles over it in a concreted structure.

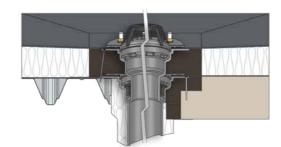

- + Non-flammable
- Loose/fixed flange construction

SitaMulti

- High discharge rate
- + Sizes up to DN 150

vertical

### Installation example

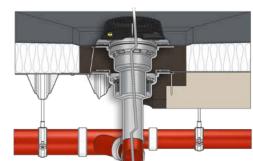

### **Properties**

The SitaDSS Multi roof outlet set new standards in versatility. It was designed among other things, for the installation of internal gutters. Its fire resistance ensures it can be utilised in places with high fire protection requirements.

- + Non-flammable
- Loose/fixed flange construction
- Matching insulating body made of foam glass available
- Suitable for gutters

# for SitaPipe:

Pipeline system for gravity drainage and siphonic drainage!

SitaPipe is the ideal complement for SitaGullys. With all shaped parts and securing materials in the SitaPipe series, pipeline systems for gravity drainage and siphonic drainage can be realised without gaps. Also the perfect solution for connecting to PUR gullies and stainless steel gullies.

# SitaPipe stainless steel

### **Properties**

A high-performance pipe system for siphonic and gravity drainage in stainless steel. The versatile modular system brings individual construction solutions and a timeless look to main and emergency drainage. It can be used wherever special requirements need to be met. The weather- and age-resistant stainless steel pipes are also suitable for outdoor use. Resistant to chemical stress and non-flammable, they meet high safety requirements.

- + For direct connection to Sita outlets
- → For main and emergency drainage
- + For conventional and siphonic drainage

# **SitaPipe PP** pipe system

SitaPipe PP

### **Properties**

It's really easy to find the right downpipe for the conventional drainage outlet. The SitaPipe PP program means you don't have to spent time searching, and instantly brings system competence to the site. With millimetre accuracy, the individual system components are matched to each other and to the particular conventional drainage outlet. They can be connected directly to the roof outlet. A plug-in coupler system holds everything in place securely. And the ability to withstand pressures up to 1.5 bar provides peace of mind in case the ground pipeline is ever blocked or overloaded. In practice this means: Problem-free installation in buildings up to 15 metres in height.

- + For main and emergency drainage
- UV stability suitable for internal and external use
- + 3-layer composite system dimensional stability and more impact-resistant
- + Sleeve connections, pipes and formed parts suitable for overpressures up to 1.5 bar - equivalent to a water column of 15 m
- + The economical connecting pipe system made of polypropylene easy installation

# Award-winning.

### Sita - meets the standards

Standard ISO 9001 defines the requirements for a company's certifiable quality management system. The required properties of the products and services are regularly monitored by a certified company to satisfy quality -related customer requirements.

Standard ISO 14001 defines the requirements for a company's certifiable environmental management system. The fulfilment of environmental objectives and their continuous improvement are monitored and evaluated.

### Sita - among the 100 most innovative companies

The TOP 100 has been recognising the most innovative medium-sized German companies for the last 25 years. Sita was added to the list in 2017 - including for its excellent knowledge of technical requirements and its permanent exchange with dealers, roofers and architects.

# Supports standards.

### Sita is a member of the IFBS

The Industrial Federation for Construction Systems in Lightweight Steel assures the quality standards of large components and drafts technical rules and regulations.

### **Compliance with regulations:** Sita and DIN

### Sita and the RAL quality mark

A guarantee of top quality and safety: RAL quality mark & services goes beyond the statutory requirements. It is a legally binding decision-making aid for architects, craftsmen and developers.

# **Product-tested.**

### Tested safety by TÜV

Certification by TÜV Rheinland LGA Products GmbH is a procedure which Sita Bauelemente GmbH undertakes on a voluntary basis. It provides you with the guarantee that Sita products comply with the requirements of DIN EN 1253 and are regularly monitored by an independent institution.

### Regulated by the Ü mark

Roof outlets are manufactured in accordance with DIN EN 1253-2 and treated as regulated building products under Building Regulations List A Part 1. Its applicability must be confirmed in the compliance verification required for this purpose - why Sita bears the compliance mark (Ü mark).

### New 6-year assurance: **ZVDH** material guarantee

Sita has lodged a comprehensive guarantee for almost all its products via the ZVDH. This provides registered companies not only with compensation in the event of damage but also the assurance of the reimbursement of the removal, installation and, if necessary, scaffolding set-up costs.

### **Protects the** environment

### **Interseroh Climate Protection** Certificate

Sita is one of the companies protecting the climate by its good example: Recycling transport packaging helps to prevent millions of tonnes of greenhouse gases and recover valuable resources.

### Sita uses green electricity

The electricity Sita purchases comes from systems which generate electricity from renewable sources.

# **Our free** calculation service.

Do you need planning security? We can provide advice and help. And we make it very easy for you.

Our experts calculate your main and emergency drainage in compliance with the standards, based on the data of your roof area. Giving us the location of your project enables us to include precise rainfall data in the calculation. That gives you an accurate result calculated easily and exclusive for exactly your projectpersonal and precise. Simply complete our online form and send it to us.

If you have any questions, feel free to give us a call: +49 (0) 2522 8340-0

Sita advice provided the security I needed at all phases of planning and construction.
